**STATEMENT FROM WISCONSIN BIOFUELS ASSOCIATION**

“We applaud the action today of President Biden to save consumers money and ensure the availability this summer of lower cost, higher value fuel. E15 or Unleaded 88 has been sold throughout Wisconsin now for several years, but an outdated and arbitrary EPA rules threatened to remove the fuel’s availability this summer.

“Fuel containing 15% ethanol, rather than the standard 10%, costs less, has higher octane for performance, and has a much lower carbon score. It’s a win, win, win for consumers, our Wisconsin economy, and the environment.”

Erik Huschitt  
President, WBFA
